Novel monoclonal antibody, useful for detecting B.anthracis, and for treating B.anthracis infection, is specifically reactive against Bacillus anthracis and is non-reactive with B.thuringinesis and B.cereus.

Claim 6; Fig 1; 27pp; English.

The present invention relates to a monoclonal antibody which is specifically reactive against Bacillus anthracis EA1 antigen. The present sequence is the mature EA1 protein from Bacillus anthracis. The EA1 protein corresponds to the eag gene. The monoclonal antibody is highly specific for Bacillus anthracis, and can distinguish Bacillus anthracis from closedy related non-pathogenic species. The present sequence is useful for producing a vaccine against Bacillus anthracis and the antibody is useful for treating, preventing or controlling Bacillus antibody is useful for treati anthracis infection (anthrax)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             381
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     NNK-VYEGDNAVVQ----VELKDQFNAVTTGKVEYESLNTEVAVVDKATGKVTVLSAGKAP 437
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present sequence represents a bacterial surface array protein (SAP). SAP is used in the method of the invention. The specification describes a method for detecting the presence of Bacillus anthracis in a test sample. The method comprises contacting the sample with a capture reagent and detecting whether the a SAP is bound to the capture reagent, which is indicative of the presence of B. anthracis in the sample. The method is useful for detecting the presence or absence of B. anthracis in a test
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            anthracis

cc proliferation or the activity of a gene in an operon required for cc proliferation; (7) identifying a compound that influences the activity of the gene product or that has an activity against a biological pathway can be product or that has an activity against a biological pathway in which a proliferation. Or that inhibits cellular proliferation; (8) identifying a gene required for cellular proliferation or the biological pathway in which a proliferation-required gene or its gene product lies or a gene on which the test compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound's activity; (11) a culture comprising strains in which the extent or compound's activity; (11) a culture comprising strains in which the set of product is overexpressed or underexpressed; (12) determining the extent or compound of an organism. The antisense nucleic acids are useful for strains; or (13) identifying the target of a compound that inhibits the compliferation of an organism. The antisense nucleic acids are useful for drug discovery programs, or for screening homologous nucleic acids required for proliferation in cells other than S. aureus, S. typhimurium, C. required for proliferation in cells other than S. aureus, S. typhimurium, cells patent did not form part of the prisent sequence is encoded by one of the target prokaryotic essential genes. Note: The sequence data for this provers or the present did not form part of the printed specification, but was obtained comparison or proper sequences.

Also included are:

(1) a vector comprising a promoter operably linked to the mucleic acid encoding a polypeptide whose expression is inhibited by the antisense mucleic acid; (2) a host cell containing the vector; (3) an isolated the polypeptide or its fragment whose expression is inhibited by the antisense mucleic acid; (4) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular proliferation; (7) identifying a compound that influences the activity of the gene in an operon required for proliferation or that has an activity against a biological pathway or the gene product or that has an activity against a biological pathway in which a proliferation or the the test compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound, a activity; (11) a culture comprising strains in which the gene compound, a activity; (11) a culture comprising strains in which the gene or underexpressed; (12) determining the extent of proliferation of an organism. The antisense nucleic acids are useful for proliferation of an organism. The antisense nucleic acids required for cellular proliferation to isolate candidate molecules for rational confined for proliferation in cells other than S. aureus, S. typhimurium, confined for proliferation in cells other than S. aureus, S. typhimurium, confined the target prokaryotic essential genes. Note: The sequence data for this present and not form when a processed confidence is encoded by one of the target procaryotic essential genes. Note: The sequence is contained for the printed pecification, but was obtained in electronic format directly frow WPO at the printed for proliferation or an electronic format directly frow WPO at the present sequence is solutined. New antisense nucleic acids, useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs. The invention relates to an isolated nucleic acid comprising any one of Antisense; prokaryotic essential gene; cell proliferation; drug design. screening New antisense nucleic acids, useful for identifying proteins or scre for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs.

SEQ ID NO 45308; 1766pp; English.

The invention relates to an isolated nucleic acid comprising any one of the 6213 antisense sequences given in the specification where expression of the mucleic acid inhibites proliferation of a cell. Also included are:

(1) a vector comprising a promoter operably linked to the nucleic acid encoding a polypeptide whose expression is inhibited by the antisense nucleic acid; (2) a host cell containing the vector; (3) an isolated or polypeptide is) producing the polypeptide; (6) inhibiting cellular proliferation or the activity of a gene in an operor required for proliferation, (7) identifying a compound that influences the activity of the apens product or that has an activity against a biological pathway required for proliferation, or that that inhibits cellular proliferation; (8) identifying a gene required for cellular proliferation or the biological pathway in which a proliferation-required gene or its gane product lies or a gene on which the test compound that inhibits proliferation; (9) manufacturing an antibiotic; (10) profiling a product is overexpressed or underexpressed; (12) determining the extent or which each of the strains is present in a culture or collection of proliferation of an organism. The antisense nucleic acids are useful for the proliferation of an organism. The antisense nucleic acids are useful for the proliferation of an organism. The antisense nucleic acids are useful for the profileration of an organism. The antisense nucleic acids required for cellular proliferation of an organism. The antisense nucleic acids are useful for the profileration of the stream of the solate candidate molecules for a candidate molecules for a callular proliferational and an organism or for solate candidate molecules acids required for the processed or underexpressed; (12) determining and the profileration of an organism. The antisense nucleic acids are useful for the processing or and processing or and processing or and processing or and processing or and processing or and processing or and processing or and drug discovery programs, or for screening homologous nucleic acids required for proliferation in cells other than S. aureus, S. typhimurium, K. pneumoniae or P. aeruginosa. The present sequence is encoded by one of the target prokaryotic essential genes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from MPPO at tp.wipo.int/pub/published_pct_sequences

cc (1) a vector comprising a promoter operably linked to the mucleic acid encoding a polypeptide whose expression is inhibited by the antisense nucleic acid; (2) a host cell containing the vector; (3) an isolated polypeptide or its fragment whose expression is inhibiting calculation antisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide; (6) inhibiting cellular producing the polypeptide; (6) inhibiting cellular proliferation or the activity of agene in an operon required for proliferation, or that has an activity against a biological pathway in which a proliferation, or that inhibits cellular proliferation; (8) identifying a gene required for cellular proliferation or the biological pathway in which a proliferation-required gene or its gene product lies or a gene on which the test compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound's activity; (11) a culture comprising strains in which the extent or which each of the strains is present in a culture or collection of product is overspressed or underexpressed, (12) determining the extent or which each of the strains is present in a culture or collection of strains; or (13) identifying the target of a compound that inhibits the collection of an organism. The antisense mucleic acids are useful for collular proliferation in cells other than S. aureus, S. typhimurium, K. pneumoniae or P. aeruginosa. The present sequence data for this contract diaget prokaryctic essenting lense. Note: The sequence data for this patent did not form part of the parameters.

Promoter regions of the gene are used in genetic constructs providing surface expression of heterologous proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    216

                                                                                                                                                                                                                                                                  The present sequence is the Bacillus stearothermophilus PV72 S-layer protein, sbs-B. S-layer structures can be used as vaccines or adjuvants, particularly when they include a bacterial ghost that may contain additional epitopes in its membrane. Other uses of recombinant sbs-B, depending on the nature of the inserted peptide, are as an universal carrier for biotinylated reactants for use in immunological or hybridisation assays (the insert is streptavidin), to induce immune responses (epitopes), as a reagent for removing cytokine or toxin from serum (antigenic epitopes), as an encleular spinning nozzle (polyhydroxybutyrate synthase) and as a molecular laser (luciferase). functional recombinant polypeptides (I), at least one being in carrier bound form. The products of the invention have antibacterial activity.

(A), or, where bacterial, their ghosts (B), are useful as vaccines or adjuvants (specifically for presentation of immunogenic epitopes of pathogens or autologous immunostimulatory polypeptides, e.g. cytokines), or preferably, as enzyme reactors for performing a cascade of reactions, specifically synthesis of poly(hydroxyalkanoate). Localization of individual (I), specifically anxymes, in separate cellular compartments avoids adverse reactions between products and substrates, when being used 592 667 643 Host cell, useful e.g. as bioreactor for production of poly(hydroxyalkanoate), containing two or more recombinant polypeptides, with at least one in carrier-bound form. 700 LOFKGNE------ELTLSTSSSTGNVDGTAEGMTKRIPGK-YI--NSASVPASATVAT 593 -DKIVNGKVEVKYFKNASD---TTPTSTKTITVNVVNVK-ADATPVGLDIV----APSKI 608 LDLNVSTTVEYQLSKYTSDRVYSDPENLEGYEVESKNLAVADAKIVGNKVVVTGKTPGKV DIHLIKNGATAGKATVEIVQ-ETIAIKSVN------FKPVQTE---NFVEKKINIGTV LELEKSNLDDIVKGINLTKETQHKVRVVKSGAE-----QGKLYLDRNGDAVFNAGDVKL This invention describes a novel host cell (A) comprising at least S-layer gene; sbsB; antibacterial; vaccine; adjuvant; bioreactor; polyhydroxyalkanoate synthesis. | :|: -----DQFVVVA-----813 749 SPVTVXLNSSDNDL-----TPRELIFGVIDPTQLV----KDEDI 770 GDVTVS-QISDSALPNFKADLYDTLITKYTDKGTLVFKVLKDKDV 1. .31 /label= signal_peptide 32. .921 /label= mature_peptide Disclosure; Page 20-22; 26pp; German.                                                                                                                                                                     Peptide
                                                                                                                                                                                        Protein
```

This invention describes a method for the production of a S-layer protein (I) which comprises (a) preparing a Gram-negative prokaryotic host cell (I) which comprises (a) preparing a Gram-negative prokaryotic host cell cransformed with nucleic acid (II) encoding (I), linked to a signal sequence (SS) that encodes a protein which causes at least one of (i) into the external or cytoplasmic membranes and/or (ii) secretion of (I) into the periplasmic space or extracellular medium, (b) culturing the cell to express (I) and (c) optionally recovering (I) from the membranes, periplasmic space and/or extracellular medium. (b) considered integration into the extracellular medium. (I), and is optional, promotes integration into the extracellular medium. (I), and corganelle and/or secretion into the extracellular medium. (I), and derived structures, may include a wide variety of polypeptide inserts and crace useful as (I) vaccines or adjuvants (with immunogenic epitopes or immunostimulants inserts such as cytokines) (ii) as reactors (inserts are useful as (I) vaccines or adjuvants (ii) as reactors (inserts are epimerette' for production of PBH or luciferase for use as a "molecular carrier molecule (streptavidin is inserted) for use in hybridisation and carrier molecule (streptavidin is inserted) for use in hybridisation and thereologous (I) do not form inclusion bodies but rather monomolecular comparate the method of the invention. (Updated on I7-OCT-2003 to correct the method of the invention. (Updated on I7-OCT-2003 to

                                                                                                                                                                                                                                                                                                                                                                                                                                    The isolation and purification of the high molecular weight protein enables the identification of the major protective epitopes of the protein by conventional epitope mapping. These epitopes can then be synthesised using standard techniques and incorporated into fully synthetic or recombinant vaccines. (Updated on 25-MAR-2003 to correct

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This protein comprises the high molecular weight surface protein HMW3 (1155 kpa) of non-typeable Haemophilus influenzaes strain 5 that has the immunological ability to protect against disease caused by a non-typeable Haemophilus strain and is characterised by at least one surface-exposed Benchicope that is recognised by monoclonal antibody ADG. The HWW3 amino acid sequence was deduced from an isolated hmw3 gene (see AAN30291). HMW1 (see AAW30291) HMW2 (see AAW30294) and HMW4 (see AAW30292) have also been identified. A conjugate comprising HWW3 inked to an antigen, hapten or polyaaccharide, and a synthetic peptide of 6-150 amino acids corresponding to at least protective epitope of HMW3 are also claimed. HMW proteins, conjugates and peptides can be used in vaccines, as immunogens for preparation of antibodies and as antigens for detection of these antibodies. The gene encoding the protein was isolated from Bacillus sp. KSM-365 chromosomal DNA and inserted into the E.coli vector 185322. The gene was subsequently used to produce expression vectors contg. a 1071 fragment of the gene covering amino acid residues 228-584 (AAQ94349). The expression vectors contg. the fragment were transformed into B.subtilis for production of the protein. The novel alkaline cellulase has high specific activity in an alkaline environment and is stable over wide ranges of temp. and pit, and has full activity in the presence of surface active agents and

No. 1.1e-290; Conservative 0; Mismatches 0; Indels 0;
Sequence 1, Application US/09844281

Patent No. US20020082386A1

GENERAL INFORMATION:

APPLICANT: Aldrich, Jennifer L.

APPLICANT: Aldrich, Jennifer L.

APPLICANT: Aldrich, Jennifer L.

APPLICANT: Aldrich, Jennifer L.

APPLICANT: O'Brien, Thomas

TITLE OF INVENTION: Anthrax Specific Antibodies

FILE REFERENCE: 38602.0003

CURRENT APPLICATION NUMBER: US/09/844,281

CURRENT FILING DATE: 2000-04-28

NUMBER OF SEQ ID NOS: 3

SOFTWARE: PatentIn version 3.1

LENGTH: 833
                                                                                                                                                                                                                                                                                                                                                                            TYPE: PRT ORGANISM: Bacillus anthracis
